Choosing the Right Undergraduate Program

The first step to becoming a dentist is to choose the right undergraduate program. There are many different undergraduate programs that can

prepare you for dental school, so it's important to do your research and find one that's a good fit for your interests and goals.

Some of the most common undergraduate programs for pre-dental students include:

* Biology * Chemistry * Biochemistry * Physics * Mathematics

No matter what undergraduate program you choose, make sure that it includes the following core courses:

* General biology * General chemistry * Organic chemistry * Biochemistry * Physics * Calculus

These courses will provide you with the foundation in science that you need to succeed in dental school.

Taking the Dental Admission Test (DAT)

The DAT is a standardized test that is required for admission to dental school. The DAT is a three-hour test that covers four sections:

* Natural sciences * Perceptual ability * Reading comprehension * Quantitative reasoning

The DAT is a challenging test, but it's important to do well on it if you want to get into dental school. To prepare for the DAT, you should start studying several months in advance and take a practice test to get a feel for the format and content of the test.

Applying to Dental School

Once you have taken the DAT, you can start applying to dental school. The application process is competitive, so it's important to put together a strong application.

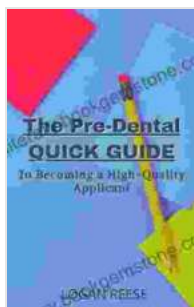

Your application should include the following:

* A personal statement * A resume * Transcripts * Letters of recommendation * A DAT score report

The application deadline for dental school is usually in the fall, so you should start working on your application early in the spring.

Getting into dental school is a challenging process, but it's definitely achievable. If you have a strong academic record, a solid understanding of the sciences, and a passion for helping others, you can make your dream of becoming a dentist a reality.

We hope this guide has been helpful. If you have any questions, please don't hesitate to contact us.
